

## Product Specification

### CORN GLUTEN FEED

Feed material

Product name	CORN GLUTEN FEED
Product group	Feed material
Material code	124461 MAISKRAFTFUTTER (dry)
Definition	Dried by-product of corn wet milling process. It consists principally of corn fibers and partly of corn protein, which is obtained during the separation of the starch. Corn steep liquor is used to higher the protein content of the product.

Parameters	Min.	Max.	Unit	Methods
Moisture	-	12,5	%	Drying oven (71/393/EWG)
Dry substance	87,5	-	%	Drying oven (71/393/EWG)
Crude protein (N x 6,25)	18,0	-	%	Dumas (ÖNORM EN ISO 1634-1)
Crude fibre	-	15,0	%	Analytic external (71/393/EWG)
Starch	-	25,0	%	Polarimeter (71/393/EWG)

#### Shelf life and storage conditions

Product shelf life is 12 months.

Store product in dry and clean area (<20°C; <60% RH) Stock should undergo regular rotation.

#### Packaging

Sold as bulk product and in Big Bags (1150 kg/unit).

#### General Information

Feed material

Suitable for use in GMO – free feeding stuff, certified by agroVet GmbH

Positivliste für Einzelfuttermittel der DLG: 01.05.14 Maiskleberfutter

Feed safety database [GMP+]: 1.057 Maize gluten feed

Catalogue of feed materials [EU No 68/2013]: 1.2.9 Maize gluten feed

#### Monitoring of by-products

This by-product underlies the EU - regulations for feed materials and is controlled by a risk based monitoring program (according to GMP+ certification).

Because of its natural origin (maize) we suggest that this specified by-product underlies natural variations regarding its mycotoxines content. Under the circumstances naturally occurring variations of the mycotoxin content – whether they comply with the EU regulation – can hold a risk for specific applications as for young animals and sows.

Undesired substances like pesticides, mycotoxines, heavy metals and microbiological parameters are controlled according to our risk based monitoring program.

Test results of our monitoring analysis are available on request.
